

Fintraffic OCPI platform onboarding for Charge Point Operators (CPO or eMSP)

Fintraffic has implemented an OCPI platform that currently supports a subset of OCPI 2.1.1 and 2.2.1 protocol versions. Fintraffic acts as a National Access Point (NAP) and will use the OCPI location module to fetch and receive location information and updates. Data is not shared via OCPI protocol, only collected using the protocol.

If you are a CPO and want to connect to the Fintraffic OCPI platform to share OCPI locations and realtime updates, here is the information we need:

(If possible, we would like to first connect our test environment with your test environment and then move on to production once we have seen that everything is working. Please provide the following information for both if they are available.)

1. VERSIONS_URL for the versions module endpoint of the OCPI platform, e.g.
`https://ocpi.cpo.fi/ocpi/cpo/versions`
2. CREDENTIALS_TOKEN_A e.g. `7C7AH240-FB87-4FD5-8AFA-B39C73A98F8F`
3. Is token base64 encoded: `yes / no`
4. PLATFORM_PARTY_ID e.g. `XYZ`
5. PLATFORM_COUNTRY_CODE e.g. `FI`
6. For all operators whose data is transferred to our platform (CPO's):
 - a. PARTY_ID
 - b. COUNTRY_CODE
 - c. NAME
 - d. URL (Homepage URL for publishing)

When we get this information, we will initiate OCPI registration via credential exchange. The credentials object sent by Fintraffic will contain:

- role: `NAP`
- party_id: `NAP`
- country_code: `FI`

Fintraffic's OCPI platform will then periodically fetch data from the locations module of the registered platform and allow PUT and PATCH updates to the locations module from the registered platform. For the 2.2.1 OCPI

version we also support tariffs module. We fetch data from the tariffs module of the CPO's platform and allow PUT and DELETE updates to the tariffs module from the registered platform.

Data sharing

Fintraffic will share the data through custom APIs from Digitraffic. API documentation is available at <https://www.digitraffic.fi/>

Fintraffic OCPI development

We plan to support OCPI version 2.3 in the future, but the development schedule is not yet confirmed.
